

What's new in spraying ?

The new Matrot boom circulation: the PPI circulation

For a precise and instant spray control

An ultra precise spraying

Spray from the first centimeter

- Enjoy the advantages of a continuous circulation
- The booms are ready to spray to the requested pressure as soon as the nozzles open
- Profit from a more efficient flow

Perfect control of the treatment process

- The control screen provides you with highly accurate information never achieved before
- Zero risk of clogging!

Simple and quick to use

Rinse booms quickly and easily

- No return to the tank when rinsing booms
- Control boom rinsing from the cab*

Real savings
and environmentally friendly

Reduce your water consumption

- 6 times less liquid required to rinse the booms
- Residual volume of several liters only

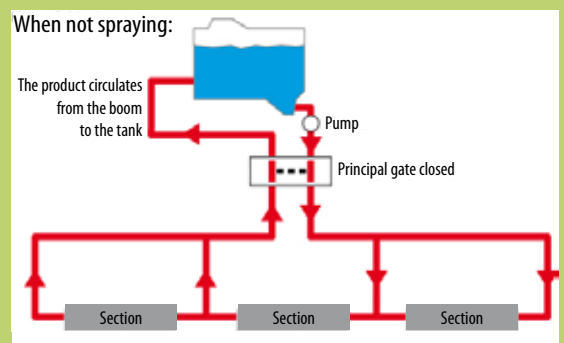

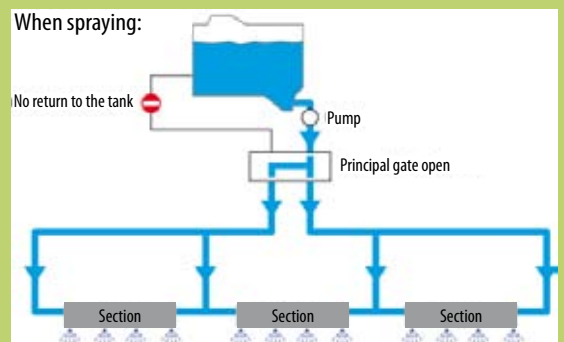

Available on ranges:

- MAESTRIA
- XÉNON
- M24D Hellios

A simple operation

- When not spraying, the solution flows continuously into the pipes. The booms are always agitated
- Spraying pressure is maintained during circulation
- When starting spraying, the main valve reverses so as not to generate any solution return to the tank
- Pneumatic nozzle control

* The PPI circulation is compatible with bottom tank dilution (option).
